LUCKMEN, TOWN.C.D., Van Aken,S., Utterback,T., TITLE EST9 from mycella of Colletotrichum trifolli race 1 JOURNAL Unpublished COMMENT Other EST9: EST612074	Contact: Department of Flant Pathology University of Minnesota 495 Borlang fall, 1991 Upper Buford Circle, St. Paul, MN 55108, USA Tel: 612 655 1243	Enail: Gebbys@toctof.orl.umn.edu Trick sequence name: MTSRE6GTV More information is available at: www.medlcago.org Seq primer: (gtA ARA CgA CCC ACC ARA ggg C). FRATURES Location/Oualifiers	rce	/dazte=-taxon:seto- /clone=-pgcf=-66* /tissue_type=-mycelia* /tissue_type=-young, actively growing mycelia (3 days after inoculation) grown in liquid culture (cutin minimal medium containing ?Aglucose).	/clome_libe_bSCT* //clome_libe_bSCT* //clome_vector: pBluescript SR+; Site_1: EcoRI; Site_2: EcoRI; isolate: Sap2 : clNA was prepared from polyA+ enriched RNA The clNA was ligated into Lambda gill from	Stratugeme and packaged using Gigapack packaging extracts.  An aliquot of the amplified library was used to transduce E. coli X1090 and phage Dwit May was purified from a liquid lysate. The CDMA inserts were gel purified after EcoRI digestion and ligated into palwescript SR. Aliquots of the ligation were used to transform E. coli Disfalpha which were plated onto medium with X-qal for selection of	אפרה הימינה סוורת והפתיחהה אדרה ים אמד דמן מפדפנורים מי

ECORI; isolate: Jap2; cDNA was prepared from polyA-from
enribhed RNA The cDNA was ligated into Lambda gill from
Stratagene of apextoged using Gigaper perkapting extracts.
An aliquoof the amplified library was used to transduce
E. COLI INO9 and phage DNA was purified from a liquid
Ilyante. The CDNA inserts were gel purified after ECORI
disperion and liquoted into philoserity SK+ aliquots of
the liquion were used to transform E. COLI DRSIAND were plated onco medium with N-gal for selection of

//note=Vector: pBluescript SK+: Site_1: EcoRI; Site_2:
EcoRI; isolate: 1282; colonk was prepared from polyAr
EcoRI; isolate: 1282; colonk was prepared from polyAr
Statagene and peckaged using Gigaptor packaging attracts.
An aliquot of the amplified library was used to transduce
E. coli 1109 on and phage now was purified from a liquid of
Hyaste. The CDNA inserts were gel purified after EcoRI
digestion and ligated into pBluescript SK+: Aliquots of
the ligation were used to transform E. coll BMRalpha which
were plated onto medium with X-9al for selection of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /fissuc_type="yepla"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
predominantly 5' reads. T7 primer on XhoI side of insert. Appressorium inforary. Condia were garm inated on an inductive surface for 5-8 h. Sequences were processed by one of two methods. Where a full-inquth alignment to the M. grisse genome sequence was available, the EST sequence was trimed according to the alignment, otherwise sequence quality was assessed using phredphrap variation 991019 and trimmed according to phd files (0.05) and for vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    196
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         181

At 8 days of age, medium was supplemented with 1 mM sallcylic acid (SA). Roots and shoots were harvested affer 27 and material from bouble-stranded CNN was combined prior to RNA isolation. Double-stranded CNN was cioned undirectionally into different Daili sites of the pRENBS-Fil vector (5-prime Draili site La CACCANGTG).  1.Xhoi excises the CDNA insert.

Pred. No. is the number of results predicted by chance to have a core greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution. /SIDS1/gcgdata/geneseq/geneseqp-embl/AA2001.DAT:\*/SIDS1/gcgdata/geneseq/geneseqp-embl/AA2002.DAT:\* /SIDS1/gcgdata/geneseq/geneseqp-emb1/AA2003.DAT:\*

                                                                                                                                                                                                                                                   The present sequence is of the Alcaligeness aquamarinus catalase-64CA2. Cetalase-64CA2 assistance is of the Alcaligeness ordation reactions such as epoxilated may be added to detect or destroyed and the approximation. The enzyme can also be used to detect or expecting hydrogen peroxide, e.g. in commention with glyoxylia acid productory hydrogen peroxide, e.g. in commention with glyoxylia acid productory hydrogen peroxide, e.g. in commention with glyoxylia acid measurements. The acid acid of the great products and the detection and catalase-64CA2 can be used to acceed libraries for detection and purification of calls containing the enzyme. Fragments of the gene modding Catalase-64CA2 can be used to identify related sequences.

This invention relates to the DNA and protein sequences of a novel to trible control of the invention of its invention or attained to catalase polygeptide. The protein of the invention of lydrogen perceits puritied catalase polygeptide. The protein of hydrogen perceits of the protein sequence of the invention is useful for modifying amail molecules. The protein of the invention is analy molecules, by mixing the protein of the fragments with a small molecule or produce a modified small molecule. The protein of the invention is also useful for catalysing biochemical reactions, for hydrolysing specifically to the protein. The nuclect acid sequences of the specifically to the protein. The nuclect acid sequences of the specifically to the protein. The nuclect acid sequences of the section is useful as a probe to determine whether a biological sample, such as a soil sample, contains an organism having the nuclect acid or such as a soil semble, contains an organism having the nuclect acids or such as a soil semble, contains an organism having the nuclect acids. As antibody that binds the cellulase procedures to isolate or purity the protein of from detection of protein of protein of the invention is useful in immunosificinty contains expanse to table, is heat resistent, and is able to the invention section is the response to repression in a biological sample.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 GLNLDILHQQDRKSDPMDPDFNYREEVRKLDFDALKKDVHALMTDSQEWWPADWGHYGGL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 1 MNNASADDLHSSLOORCRAFVPLVSPRHRAIRERAMSGKCPVMHGGNTSTGTSNKDWWPE 60

(REAL). Rath has a promoter which is induced by a reactive oxygen species (RAT). Rath has a promoter which is induced by a reactive oxygen species (RAT) in the RAT gene can be used in the method of the invention. The specification describes a method conspication that ability of a compound to remove a ROS. The method conjust see previous that is a RATH while a RATH while is a RATH while a RATH while is a RATH while a R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FARMAMNDEKTAALTAGGHTVGNCHGNGNASALAPDPKASDVENQGLGWGNPNMQGKASN 336

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               197
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               273
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  94
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           77
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is of the Microscilla furvescens catalase-53CAI.

Cutalase-73CAI may be used to catalyse oxidation reactions such as epoxidation or hydroxylation. The enzyme can also be used to detect to describe hydrogen percutale, e.g. in connection with glyoxylic acid preduction. Discensors, contact lass cleaning, pulpydaper bleaching and parternisation of darry products. Antibodies realised against producting and purification of calls containing the enzyme. Prespects to the gene product as a cargine. Frespects of the gene encoding catalase-53CAI can be used to identify related sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             LKKDVHALMTDSQEWWPADWGHYGGLMIRMAWHSAGTYRIADGRGGGGGGGGRAPLNSW

The invention realites to a novel method of detecting Mycobacterium to theoremists. The method comprises amplifying the DMA in the samples to generate a detectable amount of amplified DMA comprising a catalase. Provide (Rut) DMA fragment with sequence of bases 904-1530 of the PMA tuberculosis strain H37PW MX katG gene sequence. The method optionally truberculosis strain H37PW MX katG gene sequence. The method optionally threcoilion mutation in coden 315 (83197 mutation), indicative of an consorting act of hydraxide (IMN) resistant W. tuberculosis strain. The method can be used to detect M. tuberculosis in this disease is a major count of the depends on identification of the ctologic agent M. tuberculosis. This disease is a major cause of human morbidity and mortality, and conclusive disposais of M. tuberculosis is the disposal of method can be identified the been used in tuberculosis treatment but strains have amerged; the method allows such drug-resistant strains to be identified. The present sequence represents the wild-type M. tuberculosis kind gene product.

Claimed methods of rapidly identifying strains of w. tuberculosis which are believed to the tuberculosistic during its tuberculosis which are believed to the tuberculosistic during isoniard (INH) are based on (see Any8040) that confer INH resistance and which coincidently stess. In the addition or deletion of restriction endouclease sistes. Finants (see Any80401-02) are provided for the PCR and publication of a katig gene from a test W. tuberculosis strain, and further primers (see Any80401-05) for use in the restriction fragment length polymorphism analysis of the amplified gene and hence determination of the susceptibility to INH of the strain.
                                                                                                                                                                                            Determining susceptibility of Mycobacterium tuberculosis strains to isoniazid - by detecting mutation(s) in the catalase-peroxide gene,

Exercise (Kato) DNA fragment with sequence of Dases 904-1533 of the PNA to the Comprising a catalase.

Exercise (Kato) DNA fragment with sequence. The method optionally the tuberculosis strate in 178 Was ketting of the Acto DNA fragment has a serine to threcoine mutation in codon 315 (3313T mutation), indicative of an conclusive catal Mydrated (TNN) resistant W tuberculosis strain. The method can be used to detect W. tuberculosis in biological fuluds, and subsequent treatment depends on identification of the ethologic agent M. tuberculosis. This alsease is a major cause of human morbidity and mortality, and conclusive diagnosis of Mr suberculosis. The although a major cause of human morbidity and mortality, and conclusive diagnosis of Mr tuberculosis. The although agent of the thought of the Mr tuberculosis the mino acid strains to be identified. The present sequence represents the mino acid strains to be identified. The present sequence represents the mino acid conclusive the Mr tuberculosis trains.

Exercise the Mr tuberculosis kind gene product given in Fig 7.

The complete of intercombinant production of (II) The complete of the recombinant production of (II). The complete of the recombinant production of (II) The complete of the recombinant production of (II). The complete of the recombinant production of (II) The complete of the responsibility of the restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving to complete or tissue, as molecular weight markers and as the activity of percenting antibodic squint; it, detecting or completely of states expressing (II). (II) are useful for treating of cumularity of states expressing (II). (I) and (II) are useful in addical involving a polypeptide and polymuclectide sequences have applications in complete for generic disorders or other traits to assess blogiversity of and to produce other types of data and products dependent on DNA and configurable for genemens have explained in an expension or information or acid sequences of the invention movel human configurable or genemens of the invention movel human configuration but was obtained in a beneficial did not appear in the printed of the formation of the configurable or sequences of the invention movel human configurable or sequences of the invention of the product of the configurable or sequences of the invention movel human configurable or sequences of the invention movel human configurable or sequences of the invention of the printed of the configurable or the printed of the configurable or the configurable or the printed of the configurable or the configurable or the printed or the configurable or

The invention relates to isolated polynuclectide (I) and and optopeptide (II) sequences. (I) is useful as hybridistation probes, polypeptide (II) sequences. (I) is useful as hybridistation probes, polynuclectides are chain recombinant production of (II). The copynuclectides are also used in diagnostics as expressed expense to polynuclectides are also used in diagnostics as expressed expense to confinity of expressed genes. (I) is useful in gene therapy rechniques to restore normal activity of (II) or to treat disease states involving or control as useful in energial as purpoperide in tissue, as molecular weight markers and as cod supplement. (II) and its binding participate against II, detecting or important protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in the polypeptide and polynuclectide sequences have applications in the prolyperide and polynuclectide sequences have applications in craponship for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences Addonoto-AB30377, represent novel human condition but was obtained in a electronic format directly from WIPO the analysis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             350 PIKFDMGYFDLLFGYNWELKKSPAGAHHWEPIDIKKENKPVDASDPSIRHNPIMTDADMA 409

The invention relates to isolated polynucleotide (I) and coppepted (II) sequences. (I) is useful as hybridisation probes, colymerase chain reaction (PCR) primers, oligomers, and for chromsome and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The colynucleotides are also used in disposition sequence traps to 'Or identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to creatore normal activity of (II) or to treat disease states involving the activity of (II) or to treat disease states involving the activity of (II) or to treat disease states involving a polypeptide in tissue, as molecular weight markers and as the dod supplement. (II) and its binding partners are useful for treating of states expressing (II). (I) are useful for treating of adjacedist and polynucleotide sequences have applications in the polypeptide and polynucleotide sequences have applications in the disposation for genetic disorders or other traits to assess biodiversity of annino acid sequences. Associated appendent on DNA and configuration and to produce other types of data and produced dependent on DNA and configuration and to produce other types of that man produce data for the invention. One annino acid sequences Associated appendent on DNA and configuration but was obtained in electronic format directly from WIPO activity when the activity of the invention of the activity of the annino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    506 RGSDMRGGANGARIRLAPQ---NEWQGNEPERLAKVLSVYEQISADTGASIADVIVLAGS 562
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         623 LLDRAQLMGLIGPEMIVILGGMRVLGTNYGGTKHGVFTDCEGQLTNDFFVNLTDMGNSWK 682
